To Whom It May Concern:

I am writing a response to your job opening, posted on October 18, for a Software Engineering Internship. I believe that my academic work at the Univesity of Central Florida has drilled in concepts of computer science and my leadership experience from Wicked Bao has prepared me for such work.

The academic work at UCF taught me many different concepts like data structures, algorithms, and memory allocation. I am proficient with languages such as C, Java, and HTML. I have proven my proficiency with many data structures and algorithms by passing the mandated Foundation Exam at UCF. Currently, I am learning object-oriented programming, while also working on multiple personal projects like designing games and websites.

My position at Wicked Bao as the kitchen expo has allowed me to take a leadership position that has prepared me to take on bigger roles such as this. As a kitchen expo, I micromanage the back and front of the house to ensure customer satisfaction. A position such as this demands good team chemistry and mutual respect between everyone, which I have achieved in this role. Being a popular restaurant, I am great in high-pressure and fast-paced situations. This is crucial for finishing projects by deadlines for customers.

My resume outlines my experiences and education in more detail. Is it possible to set up a meeting to discuss the open position further? You can reach out to me at (904)844-1920 or my email da610017@ucf.edu.

Thank you for considering my application. I look forward to the possibility of working and learning from the team at Activision Blizzard.

Sincerely,
David Nguyen
